

Weapon Trainers

While many training tasks have been successfully ported into the virtual reality environment, equipping a student with the skills associated with weapon handling will remain in the physical hardware domain.

Whether full scale replicas of weapon platforms or task specific trainers depicting smaller areas of platform, Pennant develop trainers that offer the student an understanding of the physicalities involved in weapon loading, arming and unloading drills.

The stores management system and weapon system units are simulated in software to enable a range of maintenance and fault finding activities.

Pennant trainers can be a mix of original aircraft parts and high fidelity replicas to provide thoroughly realistic practical hands-on experience. Mechanical items are removed and replaced using original tools and ground equipment.

Pennant has desktop software applications to support the hardware training. These Applications enable the student to practise the principles of weapon loading covering aspects of safety, tool selection etc. in a safe classroom environment before consolidating their skills on a hardware Weapon Trainer.

Pennant has worked with customers both in the UK and overseas to produce world class Weapon Trainers specific to each customer's unique need.
