

Network Rail – Driver Route Familiarisation

Pennant completed a Driver Route Familiarisation package for the upgrade between Glasgow and Kilmarnock.

The process included filming digital video footage of the existing route and building 3D models of the track, signals and stations for the 9 mile upgraded stretch.

The source data was gathered from Network Rail's design drawings and Ordnance Survey digital terrain models to map the route and build all the assets. The product also required animation and audio narration.

Deliverables included a printed route booklet. The graphics are from the product showing the computer-generated virtual route and the map indicating the driver's location. The product has navigation features agreed with Network Rail when the contract commenced.

What do our customers say?

Pennant were a new supplier on this project. They quickly understood our requirement and helped us deliver an excellent product.
